

# 551-1119-00L Microbial Community Genomics

Introduction to the course:  
Time plan, room plan, assessments

# Important information: COVID-related guidelines

- Bring and wear your own masks. Wearing masks is mandatory. Lecturers may wear a face shield or remain behind a plexiglass pane as an alternative.
- According to regulations, our sessions are planned to last for less than 2 hours each (1.5 hours) and there will be 30 min breaks in between sessions. Between our sessions, the room will be ventilated and disinfection solutions are provided.
- Whenever possible, distance rules have to be respected.
- The installation and activation of the Swiss Covid app is strongly encouraged.
- Students with any COVID-19 symptoms are not allowed to enter ETH buildings and have to inform Shinichi Sunagawa or any of the instructors.

# Supervisors

Shinichi Sunagawa

Hans-Joachim Ruscheweyh

Guillem Salazar

Melanie Lang

# Learning objectives

- Understand the basics and be capable of analyzing the composition of microbial communities using Next Generation Sequencing approaches.
- Critically assess current literature in community microbiology.
- Gain skills in planning and developing scientific projects.
- Gain skills in data analysis, statistics and critical interpretation of research results.
- Gain skills in oral presentation of scientific results and scientific writing.

# What to expect

- Introduction to the research area of microbial community metagenomics
- We will balance tutorials with REAL scientific research for the next 3.5 weeks
  - Things may not work out as planned
  - Your supervisor will be managing multiple projects as well as yours. Please be patient with them. If you have “spare time”, read papers, practice some of the skills you acquire, etc.
  - You will get out what you put in...
  - You are expected to work professionally and responsibly at all times

# Important points for *real* research

- Scientific Integrity
  - You will be working in an environment and with equipment that is shared with the Microbiome Research laboratory
  - Be respectful, do not enter experimental laboratories, etc.
  - Do not remove/modify any data on the systems that are unrelated to your work. If in any doubt ASK (we prefer stupid questions to stupid accidents!)
  - When doing original work, you need to document what you do, so that it is reproducible for anyone else
  - Take time to think and talk through course content so you understand what you are doing

## Plan for the next 3 weeks

- Learn basics of describing microbial communities through sequencing technologies
- Apply data analysis to understand the compositions in mice gut microbial communities

16S rRNA gene-based analysis of mice gut microbiota composition. Mice were sacrificed and sampled at 8 or 14 weeks of age and after (or not - control) undergoing behavioral testing. The same experimental design was conducted at different laboratories.

- Identify and work on research questions you would like to address

# Methods

- use of bioinformatics software and programming language R
- use data from PCR-amplified 16S rRNA gene fragments to analyze microbial communities
- use command line software to analyze data
- work on specific research questions in groups

# Assessment

## 1) Written report (1/3) in the format of a short scientific paper.

→ Title, Abstract, Introduction, Methods, Results, Discussion (+Figure/Table)

- Each student should prepare at least one figure/table with legends/headers
- Each participant should produce their own report. Plagiarism will not be tolerated.
- Font size 12, 1.5 line spacing. Maximum 10 pages in total including figures, legends and references.

**→ Hand in by October 18<sup>th</sup> 2020**

## 2) Written exam (1/3)

## 3) Oral presentation (1/3): 20 min (15+5)

# Timing – week 1

|             | Week 1: 15.-18.09.2020                   |   |  |   |
|-------------|--|---|--|---|
|             | Tue                                      | Wed   | Thu  | Fri                                     |
| 8:30-10:00  |  | 3. Lecture<br>Gut 16SrRNA   | 7. R Introduction<br>to R (ggplot)                     | 11. R analysis<br>(HMP data)            |
| Break       |  |   |  |   |
| 10:30-12:00 |  | 4. Scientific<br>presentation on<br>the data/project<br>(Ivanna - ZOOM) | 8. 16S pipeline /<br>Lecture                           | 12. R analysis<br>(own data)            |
| LUNCH       |  |   |  |   |
| 13:30-15:00 | 1. Introduction                          | 5. R Introduction<br>to R (base R)                                      | 9. 16S pipeline /<br>Lecture                           | 13. R analysis<br>(own data)            |
| Break       |  |   |  |   |
| 15:30-17:00 | 2. Setup<br>infrastructure<br>UNIX intro | 6. R Introduction<br>to R (tidyverse)                                   | 10. Lecture<br>Diversity / R<br>analysis (HMP<br>data) | 14. Wrap up /<br>Plan group<br>projects |
| 17:15       |  | Seminar   |  |   |

# Timing – week 2

|             | <b>Week 2: 22.-25.09.2020</b>                |  |                    |                                 |
|-------------|--|--|--------------------|---------------------------------|
|             | Tue  | Wed  | Thu                | Fri                             |
| 8:30-10:00  |  | 3. Flash talks from 3 members of the group | 7. Group projects  | 11. Group projects              |
| Break       |  |  |                    |                                 |
| 10:30-12:00 |  | 4. Group projects                          | 8. Group projects  | 12. Group projects              |
| LUNCH       |  |  |                    |                                 |
| 13:30-15:00 | 1. Lecture: Best practices for data analysis | 5. Group projects                          | 9. Group projects  | 13. Group project presentations |
| Break       |  |  |                    |                                 |
| 15:30-17:00 | 2. Group projects                            | 6. Group projects                          | 10. Group projects | 14. Wrap up / plan next week    |
| 17:15       |  | Seminar                                    |                    |                                 |

# Timing – week 3

|             | Week 3: 29-02.10.2020 |                   |                             |                                     |
|-------------|-----------------------|-------------------|-----------------------------|-------------------------------------|
|             | Tue                   | Wed               | Thu                         | Fri                                 |
| 8:30-10:00  |                       | 3. JC             | 7. Group projects           | 11. Lecture Report writing          |
| Break       |                       |                   |                             |                                     |
| 10:30-12:00 |                       | 4. Group projects | 8. Group projects           | 12. Group projects (freeze results) |
| LUNCH       |                       |                   |                             |                                     |
| 13:30-15:00 | 1. Group projects     | 5. Group projects | 9. Group projects           | 13. Group projects (freeze results) |
| Break       |                       |                   |                             |                                     |
| 15:30-17:00 | 2. Group projects     | 6. Group projects | 10. Discuss project results | 14. Wrap up                         |
| 17:15       |                       | Seminar           |                             |                                     |

# Timing – week 4

|             | Week 4: 06-07.10.2020                              |                                 |  |  |
|-------------|--|---------------------------------|--|--|
|             | Tue  | Wed                             |  |  |
| 8:30-10:00  |  | 3. Prep presentation            |  |  |
| Break       |  |                                 |  |  |
| 10:30-12:00 |  | 4. Prep presentation            |  |  |
| LUNCH       |  |                                 |  |  |
| 13:30-15:00 | 1. Exam  | 5. Presentation (13:30 - 16:00) |  |  |
| Break       |  |                                 |  |  |
| 15:30-17:00 | 2. Lecture: Presentation and report format/content | 6. Wrap up (16:30-17:00)        |  |  |
|             |  |                                 |  |  |

## Important information: locations

HCI (4<sup>th</sup> finger)

- HCI G443 – Block Course room
- HCI F423 – Shini's office
- HCI F425A/B – Sunagawa lab offices

# Important information: learning resources

- Main source of material:

[https://sunagawalab.ethz.ch/share/Teaching/551-1119-00L\\_Fall2020/](https://sunagawalab.ethz.ch/share/Teaching/551-1119-00L_Fall2020/)

- Teams group for online teaching/support:

# Important information: Seminars in Microbiology

<https://ethz.zoom.us/j/95255381852>

## Seminars in Microbiology

Program Autumn Semester 2020

*Takes place via Zoom  
usually Wednesdays at 17:15  
(ETH VVZ 551-1109-00L)*

16.09.2020

**Prof. Sara Mitri**  
University of Lausanne (CH)

Host: Prof. Wolf-Dietrich Hardt

*Eco-evolutionary dynamics in a small bacterial community*

23.09.2020

**Prof. Philipp Engel**  
University of Lausanne (CH)

Host: Prof. Shinichi Sunagawa

*Structure and function of microbiomes - lessons from social bees and their gut symbionts*

24.09.2020

**Erik Bakkeren**  
ETH Zürich, Institute of Microbiology (CH)

**at 15:00**

Group of: Prof. Wolf-Dietrich Hardt

*The evolution and adaptation of Enterobacteriaceae in the murine gut*

30.09.2020

**Prof. Jan Roelof van der Meer**  
University of Lausanne (CH)

Host: Prof. Shinichi Sunagawa

*Engineering xenometabolic capacity into the soil microbiome*

07.10.2020

**Prof. Siegfried Hapfelmeier**  
University of Berne (CH)

Host: Prof. Julia Vorholt

*Probing intestinal mucosal responses with auxotrophic Salmonella*
